

BEE STUDY

Brain Development in
Early Epilepsy

RECRUITMENT OPEN!

We are looking for babies under 10-months of age to take part in the BEE study!

Our aim is to understand development in epilepsy by comparing infants with epilepsy to those without.

We are tracking early brain, behavioural and cognitive development of babies across the first two years of their life. We travel across the UK to conduct fun and interactive assessments with the infants in their family homes! Families can also visit us at the Henry Wellcome Building in London for the assessments.

We are also recruiting for babies with epilepsy under 10-months of age!

For more information about the study and how to get involved:
